

Nutritional Rehabilitation Protocol for Patients with Weight Loss, Malnutrition, and Eating Disorders

Criteria for admission - patient's condition demonstrates <u>any</u> of the following: Severe electrolyte abnormalities; cardiac arrhythmias including prolonged QT interval; hemodynamic instability including HR < 50 bpm; blood pressure <90/60 or with significant orthostatic changes (>20 beats/minutes when stands up or 10 mm decrease in systolic BP); renal compromise; hepatic compromise; patient eating < 500 cal/day for last 3 days (acute food refusal); ketosis; severe malnutrition (<75% median BMI, BMI z-score \leq -3; loss of >10% of typical body weight; deceleration across 3 Z-score lines; intake of \leq 75% of estimated caloric needs)

Criteria for discharge - patient must demonstrate <u>all</u> of the following: Corrected electrolyte abnormalities; off electrolyte supplementation for 24 hours; No longer at risk for Refeeding Syndrome; no pre-syncope with orthostatics; normal blood pressures, including with orthostatics.

HR>45 overnight x48 hours; HR>50 during the day x48 hours. Heart Rate discharge goals to be discussed with Adolescent medicine and Hospitalist teams and adjustments to discharge criteria will be considered on a case by case basis.

Anticipated Length of Stay: 6-14 days

INPATIENT PATHWAY

CARE MGMT	ADMISSION DAY	DAY 1	DAY 2 +	BEFORE DISCHARGE	DAY OF DISCHARGE
Nursing	 Obtain nursing database and contact the nutritionist on call Admission weight – void, then have patient change into gown, and perform blinded weight. Record scale # in Epic Vital signs on admission and every four hours Telemetry, continuous Strict intake and output 	 Daily Assessment Vital signs every 4 hours Telemetry, continuous Strict intake and output Orthostatics QAM prior to breakfast (check HR and BP after 5 minutes supine and then after 2 minutes of standing). Note if symptomatic in Epic Weight before breakfast, after orthostatics. Have patient void, then change into gown. Obtain blinded weight. Record scale # in Epic 	Same as previous, except vital	signs every 4 hours	
Laboratory / Diagnostic Monitoring	CMP, Magnesium, Phosphorous, Vitamin D, Methylmalonic Acid, CBC, Ferritin, Iron profile, ESR, Celiac Panel, LH, FSH, Estradiol/Testosterone, Prolactin, TSH with reflex to Free T4, Urinalysis, ECG.	BMP, Magnesium Phosphorous QAM (6 am draw) Consider BID labs on an individual basis ->These are THE ONLY LABS NEEDED. Do NOT need DHEAS, 17OH Progesterone	BMP, Magnesium Phosphorous QAM (6 am draw) Consider BID labs on an individual basis	 BMP, Magnesium Phosphorous QAM (6 am draw) – at least first 5 completed days of refeeding and while increasing calories Consider BID labs on an individual basis

Nutritional Rehabilitation

PATIENT MEAL TIME	• If the condiment does not need to be consumed (ketchup, mustard, salt, pepper) it will be marked "FREE" and it is the patient's choice to consume it or not. All other condiments (dressing, mayo, salsa) must be consumed.					
	RN, nurse assistant, or parent supervising meal may not leave the room until the meal and rest period is finished					
	Parents/primary caregivers are encouraged to participate in meal and rest period supervision early & throughout the admission if the team feels the relationship is therapeutic					
	End of Meal:					
	After 30 minutes (15 for snack), RN or nurse assistant will remov	• After 30 minutes (15 for snack), RN or nurse assistant will remove any unfinished foods				
	• The amount of uneaten food is replaced with supplement, using the	ne menu's calorie list as a guide				
	Patient has 15 minutes to drink the supplement. If the patient does	s not drink the supplement, the resider	nt and attending physician are notifie	d		
	Give the remaining supplement via ng tube. Bolus feed unless oth	erwise specified by team				
	Remove ng tube after each feeding unless directed otherwise by to	eam				
	• If the patient vomits a meal, the calories will be replaced after the	attending physician is consulted				
	Documentation:					
	RN will record the food, the amount given, and amount eaten and	place it in the patient's chart				
	DO NOT keep the Calorie Count sheets in the patient's room					
	• RN will record the amount of supplement replacement given and the route (PO or NGT) on the patients' flow sheet					
D D	If team member is concerned about parent behavior during meals, notify team and make recommendations to limit parent involvement if necessary					
REST PERIODS	Rest periods start immediately after the patient completes a meal or snack					
	 Rest periods are 60 minutes for patients with anorexia (including purging anorexia). Rest period of 90 minutes needed for patients with diagnosis of Bulimia. Patient is not allowed to go to bathroom, brush teeth or wash hands 					
	 Patient may be given a damp cloth to clean hands or a bedpan if needed while she/he is in bed 					
	 Patient may be given a damp croth to clean hands or a bedpan it needed white sne/ne is in bed No visitors are allowed during rest periods with the exception of parents/primary caregiver 					
	Patient may watch TV, listen to music or do quiet activities in bed
